Seeing the Compile and Execution Phases in a SAS DATA Step

Reading a SAS Data Set

The DATA step may be used to read in data from an existing SAS data set, and this is what we will be using here. The general form of such a DATA step is:

DATA output-SAS-data-set; SET input-SAS-data-set; additional SAS statements RUN;

By default, the SET statement reads all of the

- observations from the input SAS data set
- variables from the input SAS data set.

Compile and Execution phases

In the following slides, we will see how the DATA step first

- compiles (sets things up, and checks for syntax errors)
 and then
- executes (runs the code, looping through the DATA step line by line for each record that it reads in)

In our example, there will be 4 lines of code in the DATA step, and 10 records, so the DATA step really executes 40 lines of instructions. (In this example, all 4 lines are used for each record—in some cases, based on how the code is written, fewer lines may be used for some records.)

Example

We will use a small input SAS data set of airline records from Los Angeles (LAX) and Dallas Fort Worth (DFW). The values for FirstClass and Economy are the number of passengers in each group.

| VIEWTABLE: Ia.Dfwlax | | | | | | | |
|----------------------|--------|------|------------|------------|---------|--|--|
| | Flight | Dest | Date | FirstClass | Economy | | |
| 1 | 439 | LAX | 12/11/2000 | 20 | 137 | | |
| 2 | 921 | DFW | 12/11/2000 | 20 | 131 | | |
| 3 | 114 | LAX | 12/12/2000 | 15 | 170 | | |
| 4 | 982 | dfw | 12/12/2000 | 5 | 85 | | |
| 5 | 439 | LAX | 12/13/2000 | 14 | 196 | | |
| 6 | 982 | DFW | 12/13/2000 | 15 | 116 | | |
| 7 | 431 | LaX | 12/14/2000 | 17 | 166 | | |
| 8 | 982 | DFW | 12/14/2000 | 7 | 88 | | |
| 9 | 114 | LAX | 12/15/2000 | | 187 | | |
| 10 | 982 | DFW | 12/15/2000 | 14 | 31 | | |

```
libname ia 'SAS-data-library';
data onboard;

→ set ia.dfwlax;
   Total=FirstClass+Economy;
run;
```

PDV

| Flight | Date | Dest | FirstClass | Economy |
|--------|------|------|------------|---------|
| | • | | • | • |

```
libname ia 'SAS-data-library';
data onboard;

→ set ia.dfwlax;
   Total=FirstClass+Economy;
run;
```

Variable names are created in the PDV (Program Data Vector) in memory and initialized to missing values

PDV

| Flight | Date | Dest | FirstClass | Economy |
